FASTING: YES

REDACTED

CELIAC DISEASE COMPREHENSIVE PANEL

Analyte	Value
INTERPRETATION	SEE NOTE
No serological evidence of celiac disease. tTG IgA may normalize in individuals with celiac disease who maintain a gluten-free diet. Consider HLA DQ2 and DQ8 testing to rule out celiac disease. Celiac disease is extremely rare in the absence of DQ2 or DQ8.	

REDACTED

URIC ACID

Analyte	Value
URIC ACID Therapeutic target for gout patients: <6.0 mg/dL	7.9 Reference Range: 4.0-8.0 mg/dL

REDACTED

LYME DISEASE AB W/REFL TO BLOT (IGG, IGM)

Analyte	Value
LYME AB SCREEN	<0.90 INDEX
REFERENCE RANGE: <0.90	
Index	Interpretation
< 0.90	NEGATIVE
0.90-1.09	EQUIVOCAL
> 1.09	POSITIVE

As recommended by the Food and Drug Administration (FDA), all samples with positive or equivocal results in a *Borrelia burgdorferi* antibody screen will be tested using a blot method. Positive or equivocal screening test results should not be interpreted as truly positive until verified as such using a supplemental assay (e.g., *B. burgdorferi* blot).

The screening test and/or blot for *B. burgdorferi* antibodies may be falsely negative in early stages of Lyme disease, including the period when erythema migrans is apparent.
